If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Computerized Auction System for use with
Title of Invention: Multiple Purchasing Media
Inventors (please provide full names): Joseph C Jennings, John M Jack,
Stephanie A Binzen
Earliest Priority Filing Date: 9/21/99

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Independent claims are: 1, 7, 10, 13, & 16. The invention is an auction system designed to allow only people with incentive award certificates or electronic credits to bid. These awards can be something like frequent flyer mileage or any other such incentive awards, and these awards are equated by the auction system in some formula of relative value, and people can also bid in their own currency and have it displayed in a common currency, which is equated to the various incentive awards by formula.

Key words are: auction + incentive awards, currency, translation or conversion of equivalence between different awards (they call them media types), different programs for bidding in different media types (ie, constrained to bid in only specified types).

Greg Manning Auctions Announces Results of Entertainment Memorabilia Auction.

Business Wire, p1117

May 7, 1999

TEXT:

WEST CALDWELL, N.J.--May 7, 1999--

Internet and Telephone Auction Grosses over \$450,000

Greg Manning Auctions, Inc. (NASDAQ: GMAI) announced today that it grossed over \$450,000 in a joint Internet and telephone auction of vintage movie posters and Hollywood & Rock 'n Roll memorabilia.

Concluded on April 20, 1999, the auction was comprised of over 1,100 lots of high quality Hollywood & Rock 'n Roll collectible merchandise such as a run of Elvis Presley posters encompassing all of the movies in which he appeared (including Jailhouse Rock, Love Me Tender, and Viva Las Vegas), guitars signed by artists such as Led Zeppelin's Jimmy Page, Jefferson Airplane, and Bruce Springsteen, and movie props such as the "Golden Idol" from Indiana Jones and the Raiders of the Lost Ark.

Greg Manning, GMAI's President & CEO, commented: "This was the first ever simultaneous Internet and telephone auction for quality movie posters and Hollywood & Rock 'n Roll memorabilia and the success that we achieved in this initial effort with this format confirms our belief that the collector community wants to be able to buy and sell collectibles utilizing **multiple bidding media**. GMAI's auctions are over the Internet, by touch-tone telephone, by mail, and in person. By utilizing all or various combinations of these bidding methods and technologies, we are able to increase the pool of our buyers, and offer our customers choice."

About GMAI

Greg Manning Auctions, Inc. is a full service auctioneer of a wide range of collectibles and diamonds, as well as the nation's leading stamp auction house and one of the largest in the world. GMAI is the first publicly owned auction company to hold real-time auctions simultaneously over the Internet and via telephone, while providing confidential transmission of bidder and seller information.

Greg Manning Auctions, Inc. has over 30 years of experience and a staff of experts in each of the product categories in which it operates; which distinguishes GMAI from common person to person auctions. Additionally, GMAI has long established and well-entrenched relationships with suppliers of quality collectibles throughout the world, and operates on a global basis. In early 1999, GMAI formed GMAI-Asia.com, which is establishing an office in Beijing, China and is anticipating conducting real-time Internet and telephone auctions in China.

GMAI's web sites are: www.gregmanning.com and www.teletrade.com. Its common stock is traded on the NASDAQ SmallCap system under the symbol GMAI, and on the Boston Stock Exchange under the symbol GGM.

This press release contains statements of a forward-looking nature relating to future events. Shareholders are cautioned that such statements are predictions and that actual events or results may differ significantly.

Greg Manning Auctions And Big Entertainment Complete Joint Internet Entertainment Memorabilia Auction

PR NEWSWIRE

May 05, 1999

WEST CALDWELL, N.J. and BOCA RATON, Fla., May 5 /PRNewswire/ -- Greg Manning Auctions, Inc. (Nasdaq: GMAI) and Big Entertainment, Inc. (Nasdaq: BIGE) announced today that in April they successfully conducted a joint Internet and telephone auction of vintage movie posters and Hollywood & Rock 'n Roll memorabilia.

The event marked the first joint auction between Greg Manning Auctions and Big. The Companies believe this was the first-ever simultaneous Internet and telephone auction for quality movie posters and Hollywood & Rock 'n Roll memorabilia.

The auction comprised over 1,100 lots of collectible merchandise, including props from Hollywood movies such as the "Golden Idol" from 'Indiana Jones and the Raiders of the Lost Ark;' clothing worn by film greats Charlie Chaplin and Lou Costello; a western shirt worn on stage at Albert Hall in London by Eric Clapton during his final performance with Cream; guitars signed by artists such as Led Zeppelin's Jimmy Page, Jefferson Airplane, and Bruce Springsteen; original hand-written lyrics by Jimi Hendrix and Steely Dan; Jimi Hendrix's personally worn Woodstock Peace Ring; and hundreds of rare movie posters and lobby cards. Movie poster offerings included Walt Disney's(TM) '\$illy \$ymphony' (the animated short in which Donald Duck(TM) made his first appearance), an extremely rare full-color theatre lobby card for the movie 'Casablanca,' a complete run of Elvis Presley movie posters encompassing all of the movies in which he appeared (including 'Jailhouse Rock,' 'Love Me Tender,' and 'Viva Las Vegas'), and an original release insert for the film classic 'Gone with the Wind.'

Greg Manning, GMAI's CEO, commented: "The success that we achieved in this initial effort with this format confirms our belief that the collector community wants to be able to buy and sell collectibles utilizing **multiple bidding media**. GMAI's auctions are over the Internet, by touch-tone telephone, by mail, and in person. By utilizing all or various combinations of these bidding methods and technologies, we are able to increase the pool of our buyers, and offer our customers choice."

Laurie Silvers, President of Big, commented: "The combination of BigE's online auction capabilities with GMAI's auction marketing skills, and the depth of the entertainment collectibles, provided the bige.com visitor a rare opportunity."

About Greg Manning Auctions, Inc.

GMAI is a leading full-service auctioneer of collectibles, with an international reputation in the collectibles markets. It is the nation's leading stamp auction house, and one of the largest houses in the world in addition to being recognized as a leading auctioneer of coins, sports trading cards, sports memorabilia, comic books, diamonds and now, collectible movie posters and Hollywood and Rock 'n Roll memorabilia. GMAI currently conducts Internet and touch-tone telephone auctions through its Teletrade subsidiary at www.teletrade.com, and telephone and live auctions at Greg Manning Auctions, Incorporated (www.gregmanning.com).

About Big Entertainment

Big Entertainment was founded by Mr. Rubenstein and Laurie S. Silvers, who earlier founded the Sci-Fi Channel(TM). Big Entertainment owns bige.com, an online studio store offering thousands of entertainment products from Hollywood studios, TV networks, and popular culture. bige.com is available on the web at www.bige.com as well as on many popular websites, including usatoday.com, broadcast.com, Excite, hollywood.com, IMDb, and Film.com. Big Entertainment also owns entertainment properties created for it by best-selling authors and media celebrities, including Leonard Nimoy and Mickey Spillane.

BigE previously announced that it had entered into a definitive agreement to acquire Hollywood Online Inc., and its website, hollywood.com, from Times Mirror, which acquisition is expected to close during the second quarter of 1999. CBS Corporation and BigE recently announced that they have signed an agreement in principle for CBS to receive a 35% ownership interest in hollywood.com, a premier web site for movies and the motion picture industry, in exchange for \$100 million of promotion and content support over a period of seven years. Big Entertainment will own 65% of the joint venture. In a separate transaction previously announced, BigE has entered into a definitive agreement to acquire CinemaSource, the nation's largest provider of movie showtimes listings to the Internet industry, which transaction is expected to close in the second quarter of 1999. Internet portals and websites that obtain their movie showtimes listings from CinemaSource include Yahoo!, MSN, Excite, Go Network, CitySearch, and Zip2, among others.

The matters discussed herein that are forward-looking statements are based on current management expectations that involve risks and uncertainties that may result in such expectations not being realized. Potential risks and uncertainties include, but are not limited to, the risks described in Big Entertainment's filings with the Securities and Exchange Commission.

(54) Title: **COMPUTERIZED AUCTION SYSTEM USING MULTIPLE PURCHASE MEDIA**

(57) Abstract: Systems and methods create and maintain an auction server operative to receive requests for displaying auction items. The bid values are displayed and received in units that are specific to a particular program in which the user is participating. Bid values can be displayed and received in differing units depending on the particular program. Thus, participants in different programs can bid on the same items using different media types or different currencies. The system automatically converts between the different media types in order to determine highest bidders and bid amounts.

AB- <NV> NOVELTY - A computer based system enabling a buyer and a seller to be efficiently matched, comprises a web based foreign exchange platform in which buyers and sellers post their requirements. A computer program in the network identifies, matches and effects a trade at a price which is the mid- point of the interbank bid /offer spread.|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) method of obtaining foreign exchange for a party;

(b) method of computing the amount of foreign exchange available to a party

USE - For buying and selling foreign currency overseas and obtaining foreign currencies while traveling abroad or for making foreign investments.

ADVANTAGE - Since the computer based system uses for trading a mid- point price substantially independent of the parties, buyers and

sellers are matched automatically in a manner that is fast, efficient, transparent and fair. As the system facilitates the direct **matching** of parties and counterparties, the settlement risk is reduced. Using the on-line system, transactions can be executed in a multitude of dimensions such as two-way, three-way, four-way, etc.

DESCRIPTION OF DRAWING(S) - The figure shows the explanatory diagram of **bid /offer pricing** for USD priced in CAD.

The card operated machine provides a variety of different goods, such as postage stamps, tickets, newspapers. The unit has one card reader (2) that is used to communicate with a customer card (7) that has a **credit** card format and has a built in integrated circuit. A second reader is used for operators card.

Both readers connect with a transfer control circuit (6) and the system includes a display (4) and keyboard entry **point** (5). The unit may also be configured such that a direct link is provided to a clearing computer.

ADVANTAGE - Provides small card control of purchasing transaction.

Dwg. 1/4|

AB- <EP> EP 518808 B

Automatic dispenser with a chip reader (2) for the **bidirectional exchange** of data between a portable chip of the chip card (7) type and the automatic dispenser (1) and a **cash** transfer controller (6) for collecting electronic **cash** from a customer chip connected to the chip reader (2), wherein the collected electronic **cash** is transferred to a portable user chip of the chip card (8) type, characterised in that exactly one chip reader (2) is provided and in that the **cash** transfer controller (6) is designed in such a way that each electronic **cash** transfer with each customer chip (7) is recorded in an intermediate memory (21) of the automatic dispenser (1) and in that the content of the intermediate memory (21) is subsequently discharged on the user chip (8) via the same chip reader (2).

Players competitively bid against one another for item cards until a game board representing a house is filled with cards representing items from collections and other items. The items of the collection are afforded designated **point** values. Extra **points** are awarded as multiple pieces of a single collection are accumulated. **Bonus** or mystery **points** are awarded at the end of a game which may have a substantial outcome in determining the winner of that game. Simulated **money** of an **equal** amount is given each player.

One player is selected during each **auctioning** session to act as the banker or judge. The players, during the game, learn to recognise various collectible items and the history of a collection of the items; learn how to manage their capital learn how to refinance or sell some of their collected items to finance continued play and learn how to get along and deal or trade with one another.

USE - **Auction** game in which players attempt to obtain a complete set of items.

The transfer system includes an identical funds transfer module (10) issued by a bank and carried by each member who may be a customer or vendor. The modules, which are adapted to **exchange** funds data **bidirectionally** each comprises a memory for storing an account balance, a keyboard (24) for manually entering the amount of transaction and an external connector (14) for interconnecting modules for data transfer. The account balance stored in each module as well as the transaction amount is displayed prior to completion of each transaction.

Upon approval of the transaction, the stored account balance of the customer module, is debited and funds data are transferred to **credit** the account balance stored in the vendor module. Since the modules are identical, the vendor module may subsequently be used in a customer mode. Ultimately the stored account balance may be deposited with the bank. An internal timer may be provided to periodically debit the stored account as a service charge for membership in the system.

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) modifying the chain length and double bond specificities of a soluble plant fatty acid desaturase comprising modifying the amino acid residue corresponding to amino acid 200 of the Ricinus communis DELTA9 acyl carrier protein (ACP) desaturase;

(2) modifying the chain length and double bond positional specificities of an acyl-ACP desaturase comprising:

(a) providing the primary amino acid sequence of the acyl-ACP desaturase;

(b) aligning the primary amino acid sequence of the acyl-ACP desaturase with the primary amino acid sequence of the R. communis DELTA9 desaturase for maximum sequence conservation;

(c) constructing a 3-dimensional model for the acyl-ACP desaturase based on the sequence conservation with the R. communis DELTA9 desaturase;

(d) identifying amino acid residues, which most closely correspond to amino acids 200, 203, 204, 205, 206 and 207 of R. communis DELTA9 desaturase, of the structure modeled in step (2c); and

(e) generating a mutant acyl-ACP desaturase having modified chain length and double bond positional specificities by replacing one or more amino acid residues identified in step (2d) with another amino acid residue;

(3) a mutant acyl-ACP desaturase characterized by its ability to catalyze desaturation of two fatty acids having different chain lengths, the desaturation rates of both fatty acids differing by not more than 4-fold, the mutant containing a point mutation at one or more amino acid residues that do not make direct contact with substrate;

(4) a mutant acyl-ACP desaturase with one or more amino acid substitutions at residues that do not make direct contact with the substrate, which is characterized by changes in chain length and double bond positional specificity, compared to its wild-type counterpart;

(5) a nucleic acid sequence encoding the mutant acyl-ACP desaturase of (3), and having a sufficient degree of amino acid identity with the amino acid sequence of R. communis DELTA9 desaturase to enable statistically significant sequence alignment with the R. communis DELTA9 desaturase;

(6) a DNA vector comprising, in expressible form, the nucleic acid of (5) that encodes the mutant acyl-ACP desaturase7) a cell transformed

with the DNA expression construct of (6);

(8) a DNA vector comprising, in expressible form, a nucleic acid sequence encoding a chimeric acyl-ACP desaturase able to catalyze desaturation of two fatty acids with different chain lengths and desaturation rates;

(9) modifying the chain length and double bond position specificities of a soluble plant fatty acid desaturase, comprising modifying amino acid contact residues in the substrate binding channel of the soluble fatty acid desaturase, which contact the fatty acid and modifying one or more amino acids that do not contact the substrate;

(10) modifying the chain length and double bond positional specificities of an acyl-ACP desaturase comprising:

(a) employing steps (a)-(c) of the method of (2);

(b) identifying amino acid contact residues within the substrate binding channel of the constructed model;

(c) employing step (d) of the method of (2)

(d) generating a mutant acyl-ACP desaturase having modified chain length and double bond positional specificities by replacing one or more of the amino acid contact residues identified in (10b) with another amino acid residue, and replacing one or more amino acid residues identified in (10c) with another amino acid residue;

(11) a mutant acyl-ACP desaturase able to catalyze desaturation of two fatty acids having different chain lengths, and desaturation rates which differ by not more than 4-fold, and which contain a **point** mutation at one or more amino acid contact residues in the substrate binding channel, and further contain a **point** mutation at one or more amino acid residues that do not make direct contact with the substrate;

(12) a mutant acyl-ACP desaturase having amino acid substitutions at contact residues within the substrate binding channel, and amino acid substations at residues that do not make direct contact with the substrate;

(13) a nucleic acid sequence encoding the mutant acyl-ACP desaturase of (11), where the nucleic acid sequence has a sufficient degree of amino acid identity with the amino acid sequence of R. communis DELTA9 desaturase to enable statistically significant sequence alignment with the R. communis DELTA9 desaturase; and

(14) a cell transformed with a DNA expression construct comprising, in expressible form, the nucleic acid sequence of (13).

USE For designing and producing new types of acyl-ACP desaturases without isolating cDNAs for these enzymes from plant sources. In addition, the method is useful in designing acyl-ACP desaturases that can catalyze the synthesis of economically **valuable** monounsaturated fatty acids that are not found in nature. The method **offers** an alternative means of petroselinic acid production in plants. This fatty acid is used to produce low-calorie margarine and as a precursor of adipic acid for the manufacture of nylon 66. The mutants generated by altering the identity of one or more contact residues in the substrate binding channel can be used to generate acyl-ACP desaturases having unique functional characteristics. Such enzymes are useful, e.g. for generating vegetable oils rich in monounsaturated fatty acids. The oils are important in human nutrition and can be used as renewable sources of industrial chemicals. The vectors are useful for producing a desired protein product (e.g. mutant acyl-ACP desaturase) within a plant cell.

ADVANTAGE - By producing the enzyme in situ, modification of the product can occur prior to harvest, allowing rapid purification of the desired fatty acid with the appropriate double bond position, and without the need of costly manufacturing steps. In some instances, more than one mutant acyl-ACP desaturase may be desired in a particular transgenic plant to produce fatty acids with double bonds at multiple positions. Plants are also easy to cultivate, and grow in large quantity.

pp; 21 DwgNo 0/2|

AB- <TF> TECHNOLOGY FOCUS - BIOTECHNOLOGY - Preferred Enzyme: The amino

acid residues are located at the upper part of the substrate binding channel of the soluble fatty acid desaturase. The soluble plant fatty acid desaturase is an acyl-ACP desaturase, specifically DELTA9 desaturase. The DELTA9 desaturase is produced by the plant *Thunbergia alata* or *R. communis*. Preferably, the amino acid residues that do not make direct contact with the substrate correspond to amino acids 200, 203, 204, 205, 206 and 207 of the *R. communis* DELTA9 ACP desaturase. The mutant acyl-ACP desaturase is characterized by changes in chain length and double bond positional specificity compared to the wild-type acyl-ACP desaturase counterpart. The first fatty acid of the mutant acyl-ACP desaturase has a chain length of 16:0 and the second fatty acid has a chain length of 18:0. The DELTA9 acyl-ACP desaturase is produced by mutating the nucleic acid cloned from *T. alata* or *R. communis*. The point mutation is introduced into wild-type *R. communis* DELTA9 ACP desaturase at residue 200 of *R. communis* DELTA9 ACP desaturase. The point mutation may also be introduced into wild-type *R. communis* DELTA9 ACP desaturase at one or more amino acid residues corresponding to 203, 204, 205, 206 and 207 of the *R. communis* DELTA9 ACP desaturase. The chimeric acyl-ACP desaturase comprises DELTA6-16:0 in which amino acids 172-201 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 178-207 of the *T. alata* DELTA9-18:0 ACP desaturase. The chimeric acyl-ACP desaturase also comprises DELTA6-16:0 in which amino acids corresponding to amino acids 172-196 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 178-202 of the *T. alata* DELTA9-18:0 ACP desaturase. The chimeric acyl-ACP desaturase may comprise DELTA6-16:0 in which amino acids 183 and 184 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 188 and 189 of the *T. alata* DELTA9-18:0 ACP desaturase, respectively. The chimeric acyl-ACP desaturase may also comprise DELTA6-16:0 in which amino acids 176 and 195 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 181 and 200 of the *T. alata* DELTA9-18:0 ACP desaturase, respectively. The chimeric acyl-ACP desaturase may comprise DELTA6-16:0 in which amino acids 176, 183, 184, 200, 201 and 202 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 181, 188, 189, 205, 206 and 207 of the *T. alata* DELTA9-18:0 ACP desaturase, respectively. The chimeric acyl-ACP desaturase also comprises DELTA6-16:0 in which amino acids corresponding to amino acids 176, 195, 200, 201 and 202 of *T. alata* DELTA6-16:0 ACP desaturase are replaced with amino acids 181, 200, 205, 206 and 207 of the *T. alata* DELTA9-18:0 ACP desaturase, respectively.

Preferred Amino Acids: The amino acid contact residues correspond to amino acids 114, 115, 117, 118, 179, 181, 188 and 189 of the *R. communis* DELTA9 ACP desaturase. The amino acids that do not contact or make direct contact with the substrate correspond to residues 200, 203, 204, 205, 206 and 207 of the *R. communis* DELTA9 ACP desaturase.

Preferred Cell: The cell is a prokaryotic or eukaryotic cell, preferably a plant cell|

AB- <XA> EXAMPLE - Mutations L118F and P179I were introduced sequentially into the castor (*Ricinus communis*) DELTA9-18:0-ACP desaturase. The mutation L118F was generated by overlap extension polymerase chain reaction (PCR) using the coding sequence of the mature wild-type castor DELTA9-18:0-ACP desaturase in the vector pET9d as the template. Two separate PCR reactions were conducted using the following primer pairs (base changes shown in upper case): T7 primer and (I); and (II) and Primer A. The agarose gel-purified products of the two reactions were combined and amplified together with the T7 primer and Primer A. The product containing the mutation for L118F was digested with XbaI and BamHI, and inserted in place of the corresponding portion of the wild-type castor DELTA9-18:0-ACP desaturase in the vector pET9d. The double mutant was generated using the coding sequence of mutant L118F in pET9d as template, and the following primer pairs (base changes in upper case): T7 primer and (III); and (IV) and Primer A. The product generated following two rounds of PCR was digested with XbaI and PstI,

and inserted in place of the corresponding portion of the wild-type castor DELTA9-18:0-ACP desaturase in vector pET9d. Protein purification was performed using diethylaminoethyl DEAE-anion **exchange** chromatography followed by perfusion cation **exchange** chromatography. Acyl-ACP desaturation assays and analysis of reaction products were conducted. Results demonstrated the ability to modify the substrate and double bond positional specificities of acyl-ACP desaturases using amino acid alignments either alone or in conjunction with three-dimensional structural data from the castor DELTA9-18:0-ACP desaturase. (I) 5'-ccgaactccatcGaaggtattcagca-3' (II) 5'-tgctgaataccttCgatggagttcgg-3' (III) 5'-ggactgttttctgtccgAATatccattcctgaacca-3' (IV) 5'-tggttcaggaatggatATTcggacagaaaacagtcc-3' (Primer A) 5'-gcaaaagccaaaacggtaccatcaggatca-3'.|

AB- <BASIC> JP 10273740 A

The method involves collecting **valuable** metal from metal sludge
in a vertical fusion reduction furnace. The vertical fusion furnace has
several tuyeres provided in two steps through its walls. High
temperature air is blown into a charcoal filled layer. A charge of
blast furnace metal sludge containing metals at a high steam pressure
is introduced into furnace from an upper tuyere. Heat **exchange** by
sensible heat of exhaust gas from fusion reduction furnace is utilised,
and heat **exchange** takes place to more than 800degC and the charge of
metal sludge is dried.

ADVANTAGE - Enables effective usage of sensible heat of exhaust gas
for drying metal sludge. Enables to remove moisture in metal sludge
beforehand to dry it. Reduces thermal energy required for drying.
Enables energy conservation and control of CO2 gas. **Offers** usage for
recollecting **valuable** metal also from hydrated dust of low melting
point metal during dechlorination of electric furnace dust.

The method receives from a user policy requirements for the foreign **exchange** insurance policy, the policy requirements including user ID. These are then stored. The data corresponding to the specified **currency** and current market conditions is accessed. **Currency** volatility is estimated from the accessed data.

A premium cost based on the **currency** volatility is determined. A tracking code for the foreign **exchange** insurance policy is issued, which is stored corresponding to the user ID. Tracking includes the sub-step of issuing the tracking code with policy requirements.

USE - Relates to foreign **currency** **exchange** and to generating and executing insurance policies for foreign **exchange** losses.

ADVANTAGE - Protects individual consumers against unpredictable fluctuations of foreign **exchange** rates, and **offers** more flexible method for large entities to ensure against **currency** fluctuations. Protects through commonly accessible objects such as **credit** cards or

ATMs.

LA- DE 29722890(7)|

AB- <BASIC> DE 29722890 U

Here is a novelty, a sturdy prefabricated wall with air
conditioning properties which is eminently suitable for low temperature
heat **exchange** applications. It comprises a light concrete containing
mineral fillers, which is able to absorb and return atmospheric
moisture. In the manufacturing process, a tubing system is
incorporated, to form part of a water-heating and cooling circuit. The
circuit comprises multilayer polyethylene tubing (includes metallic
barrier layer), which is laid into the casting mould, together with
other cast-in components, before pouring.

Preferably, when used as an outer wall, a high level of thermal
insulation is applied, the k value being 0.17 or better. Pipework
connections are recessed into a basal box in the wall for subsequent
connection.

USE - A prefabricated wall with embedded heat **exchange** tubes and
special air tempering and conditioning properties.

ADVANTAGE - The wall combines known principles and modern
technology, to improve the air condition in buildings, for low
manufacturing and operational costs. Wall heating operates at low
temperature and is particularly suitable for certain types of
available, low-grade heat. It is highly suitable for use with heat
pumps. It can also be used in the manner of a storage heater, or as
part of a ground heat **exchange** system. The wall can be cooled when
necessary; achieving a satisfactory result with only a small
temperature drop, because of the large surface area. This has a
valuable benefit , in that the temperature is easily kept above dew
point , preventing condensation problems. Precautions are suggested
against possible puncturing when subsequently adding wall fittings

AB- <BASIC> JP 10051570 A

The system includes a network control centre (106), network
currency centre (107) and several switching units and subscriber
terminals. Each switching unit transmits and receives packets to and
from the subscriber terminals. Each packet has areas containing
information on packet classification, object subscriber ID, network
resources, network service and **exchangeable** network tariff.

A memory stores the balance of network **currency** for each
subscriber. A processor performs the read-write of each area of the
packet and updates the tariff information according to the memory
contents.

ADVANTAGE - Maintains fee system of network. **Offers discount**
service and network resources **exchange** negotiable service. Improves
performance characteristics and service quality.

FD- JP 9173603 A |

LA- JP 9173603(15)|

AB- <BASIC> JP 9173603 A

The machine includes a ball launching apparatus (7) which launches a ball, supplied from a ball supply device to two storage plates (4,10), on the surface of a game board (8). A ball expelling rail leads the thrown ball, which is accumulated in the storage plate, to an external ball collection rail to which the prize balls are expelled. The total number of balls that passes to the ball expelling rail is calculated by a ball sensor.

The computed total number of balls that passes to the ball expelling rail is displayed by the display device (33) of a ball disbursement management apparatus. A game end instruction is input to the ball disbursement management apparatus (32) by pushing a game end switch-button (36). The computed total number of balls, which is displayed in the display device, is output and written by the game result output circuit of the ball disbursement management apparatus on a predetermined recording medium (34a).

ADVANTAGE - Manages ball disbursement and provides **gift exchange** without using **money** maker in pachinko machine. **Offers** pachinko machine which can be played continuously even during overflow of balls.

FD- JP 8101899 A G06K-019/06|

LA- JP 8101899(5)|

AB- <BASIC> JP 8101899 A

The combination has a telephone card function with a fixed-amount **money**, which can be inserted in a public telephone set to which a telephone-call service of a constant fee is received. A charge for

every telephone-call service to be paid for the use of public circuit is written in an acquisition **point** and **exchange** which are given to a constant frame according to the amount sold for every telephone-call service with a constant amount.

ADVANTAGE - Reduces neither mistake nor fear of loss. Provides convenience to user in carrying since **point** card and telephone card comprised integrally on one card. Prevents firm damage to card since card combination has polyethylene terephthalate resin. Enables user to simply check data at glance. Provides necessary use to **selling** promotion. Quickly reduces **offer** of service to customer reducing staff. Directly improves customer purchase volition.

ABSTRACT: The Automated Environmental Credit **Exchange** (ACE), which holds quarterly **auctions** for pollution **credits** issued by government authorities to utilities, will hold an Internet-based trading session this week...

...TEXT: this week amid signs of a dramatic jump in its business.

The Automated Environmental Credit **Exchange** (ACE) holds quarterly **auctions** for pollution **credits** issued by government authorities to utilities. ACE is the first **exchange** to send trades through the Internet.

The Internet system seems to be catching on with some users. While only 285,000 **credits** were registered with the **exchange** for the first **auction** in April, about eight million **credits** were registered by last week. Utilities must register the **credits** before the **auction** if they have any intention of entering buy or sell orders during the auction session...

**PocketPass .Com Succes'fully Beta Tests First Prepaid Phone-Internet
Payment Card Through Brick & Mortar Stores.**

SAN JOSE, Calif.--(BUSINESS WIRE)--Sept. 5, 2000

PocketPass .Com, the Web's only pre-paid Internet payment system integrating a phone card with...

...account cards sold at brick-and-mortar retailers.

"We began beta sales of the physical **PocketPass** in mid-July, primarily in Silicon Valley convenience stores and the response has been very gratifying," said **PocketPass** CEO Jim Nations. "More than 65% of store owners gave us the thumbs up and began selling **PocketPass** cards immediately."

Nations explained that **PocketPass** limited its trial physical sales to about 50 stores in order to produce a "real..."

...use technology as well as systems and processes for sales, customer support and retailer relations.

PocketPass began operations in September 1999 and is still operating on its original \$1.25 million...

...company is now engaged in its first institutional round, a \$15 million Series B offering.

PocketPass offers a "physical world" plastic card distributed through retail establishments like convenience stores, gas stations, grocery stores, liquor, and check cashing stores. **PocketPass** ' phone card capabilities have proven to be a strong sales and marketing accelerator speeding market...

...both consumers and retailers.

The Company also offers a compatible and/or standalone, "virtual world" **PocketPass .com** Account distributed via the Web. The **PocketPass** card and **PocketPass .com** account are a combined service sharing the same account number and PIN.

The **PocketPass** card primarily targets:

-- The 59 million Americans (including 22 million teenagers) without credit cards.

-- People...

...chargebacks.

-- Content providers who need a "pay-for-play" system that can profitably handle micropayments.

PocketPass also distributes its virtual **PocketPass .com** account to Web consumers via its own Web site and co-brand Web partners. In the virtual model, customers can buy and recharge their **PocketPass** accounts with a credit card, debit card, check or another **PocketPass** .

The **PocketPass .Com** management team and directors are comprised of seasoned-startup executives bringing experience and knowledge...

ABSTRACT EP 577339 A1

A microprocessor based overcurrent trip unit includes an analog circuit for monitoring phase currents in the electrical interrupting device, adapted to interface with the microprocessor over a range of selectable set-points for instantaneous tripping and to monitor the phase currents even when the current sensing transformers are saturated. The overcurrent trip unit allows the long time delay characteristics to be varied to provide coordination with the characteristics of other overcurrent tripping devices, such as a current limiting fuse, to enhance the overall reliability of the system. For example, the function may be varied to provide either a fixed or FLAT, I_t , $I(\sup 2)t$ and $I(\sup 4)t$ functions. The overcurrent tripping device also allows for relatively wide adjustment ranges for the long time delay and short time delay protection portions of an overcurrent protection curve. (see image in original document)

ABSTRACT EP 411748 A2

A risk control matching system for trading instrument, such as foreign exchange currencies, is provided in which bids are automaticall matched against offer for given trading instruments for automatically providing matching transactoins in order to complete trades for the given trading instruments, and broken trades are readily identified with a minimization of risk to the parties to a potential matching transaction. The system comprises a host computer (20) for maintaining a book database (118)

comprising all of the active bids and offers in the system by trading instrument, a transaction originating keystation (24a) for providing a bid on a given trading instrument, a counterparty keystation (24b) for providing an offer on the given trading instrument a network (22) for interconnecting the host (20) and the keystation (24, 25b), and a plurality of transaction desks (70a, 70b, 70c), connected to the host (20) for detecting the occurrence of the potential matching transaction and "voting" on whether to commit to the match. Positive match acknowledgment signals are provided to the host (20) by the keystations (24) involved in the trade in response to receipt of match notification signals from the host (20). If one of these signals is not received back, the host (20) detects a broken trade to have occurred. Each of the keystations (24) provides an application based heartbeat signal to the host (20) which enables rapid detection of keystation (24) failure. In the event of detection of such keystation (24) failure, the host (20) cancels all bids and offers associated with the failed keystation (24).

ABSTRACT EP 407026 A2

A matching system and method for trading instruments are provided in which bids are automatically matched against offers for given trading instruments for automatically providing matching transactions in order to complete trades for the given trading instruments in which controllable subsets (110, 112) of a distributable system trading book (118) may be selectively provided to trading keystations (24) in the matching system from the host computer (20) or central system for controllably masking the available trading market. The system comprises the host computer (20) for maintaining a host book data base (118) comprising all of the active bids and offers in the system by trading instrument, a transaction originating keystation (24a) at a client site (26a) for providing a bid on a given trading instrument to the system for providing a potential matching transaction, a counterparty keystation (24b) for providing an offer on the given trading instrument involved in the potential matching transaction, and a network (22) for interconnecting the host computer (20), the transaction originating keystation (24a) and the counterparty keystation (24b) in the system for enabling data communication therebetween. Both the transaction originating keystation (24a) and the counterparty keystation (24b), which of course can comprise more than one counterparty for a given transaction, for the potential matching transaction each have an associated local data base keystation book (110, 112) comprising a subset of the host book (118). The content of each of the keystation books (110, 112) has an associated display depth range which is controllable by the host computer (20) and is updatable by transaction update broadcast messages (132) received from the host computer (20) through the network (22). The network (22) is preferably transparent to the transactions communicated via the network (22). In the system of the present invention, the broadcast messages (132) from the host or central system (20) are broadcast to all of the keystations (24) in the matching system and are used to update the keystation (110, 112) books whereas the directed messages (122, 124, 128, 130) which are sent from the central system or host (20) are directed back only to the keystations (24a, 24b) involved in the actual matching transaction. These directed messages are used to update the local entry data base or order book (114, 116) at the local keystations (24a, 24b) involved in the transaction so as to indicate what has happened to the offer or bid at that particular keystation (24a, 24b) made in the connection with the matching transaction.

ABSTRACT EP 399850 A2

A matching system for trading instruments in which bids are automatically matched against offers for given trading instruments for automatically providing matching transactions in order to complete trades for the given trading instruments, includes a host computer means (20) comprising means for anonymously matching active bids and offers in the system by trading instrument based on a variable matching criteria, which comprises counterparty credit limit between counterparties (24a, 26b) to a potential matching transaction. The system also includes a transaction originating keystation (24a) for providing a bid on a given trading instrument to the system for providing the potential matching transaction; a counterparty keystation (26b) for providing an offer on the given trading instrument involved in the potential matching transaction; and network means (22) for interconnecting the host computer means (20), the transaction originating keystation (24a) and the counterparty keystation (26b) in the system for enabling data communications therebetween. Both the transaction originating keystation (24a) and the counterparty keystation (26b) for the potential matching transaction each have an associated counterparty credit limit, with the system (20) blocking completion of the potential matching transaction between the transaction originating keystation (24a) and the counterparty keystation means (26b) when the potential matching transaction has an associated value in excess of counterparty credit limit. The assigned credit limits may be reset or varied by the users (24a, 26b) to change the ability of the user or subscriber to effectuate deals.

English Abstract

A system (10) for routing and processing financial transaction data for an electronic marketplace (38) utilizes, browsers to communicate with the system (10) over the Internet via web pages and includes a business process transaction manager (40), a key aspect of which is a message broker function. When information is received about a member from the electronic marketplace (38) or the member itself, the system (10) performs processing related to various services. The system (10) includes databases (36) used by the system (10) in connection with its message broker function, for storing information on transactions and positions, a rules engine, and for data about the members.

French Abstract

L'invention concerne un systeme (10) destine a l'acheminement et au traitement de donnees sur les operations financieres, destine a un cybermarche (38). Ce systeme (10) comprend, par exemple, des explorateurs permettant la communication avec le systeme sur Internet par l'intermediaire de pages Web et un gestionnaires d'operations des processus commerciaux (40), un element essentiel de ce systeme etant la fonction de gestionnaire de flux (message broker). Lorsque des informations concernant un membre arrivent du cybermarche (38) et/ou du membre lui-meme, le systeme (10) effectue le traitement associe a plusieurs services. Le systeme (10) comprend des bases de donnees (36) utilisees par le systeme en connexion avec son gestionnaire de flux, destinees au stockage des informations relatives aux operations et aux positions ainsi qu'aux donnees concernant les membres, ainsi qu'un moteur de transformation.

Detailed Description

Claims

Fulltext Word Count: 124618

English Abstract

Computer-based systems are described that establish public/private mechanisms with which users can transfer, transmit, receive, aggregate, distribute and exchange cash and non-cash assets, wherein a user, the user's account(s), and its/their transactions can be chosen to be any combination of anonymous, identified, masked and/or traceable. Systems are also described that include user-defined, user-selected, and/or user-determined attributes and constraints for transactions, accounts, the contents of accounts, and other related objects, as well as systems that include dynamically created tokens and aliases for account numbers, and hierarchies of user-defined sub-accounts. Additionally, there are a methods and apparatus that afford users the ability to transfer ownership and/or control of, and to alter the ways of accessing their assets. Certain preferred forms of the later methods and apparatus, referred to as advanced asset management systems, do not require the physical manifestation and transfer of the discrete assets themselves. Use of all of the foregoing systems make available new and improved traditional and electronic forms of retail, wholesale, entitlement, gifting, auction, barter, gaming, investment, security and other commercial and non-commercial activities.

French Abstract

Cette invention se rapporte a des systemes informatiques qui etablissent des mecanismes publics/prives a l'aide desquels les utilisateurs peuvent transferer, transmettre, recevoir, regrouper, distribuer et echanger des avoirs sous forme liquide et non liquide, ou un utilisateur, le ou les comptes de l'utilisateur et ses/leurs transactions peuvent etre choisies pour etre anonymes, identifiees, masquees et/ou tracables dans n'importe quelle combinaison de ces caracteristiques. Cette invention decrit egalement des systemes qui contiennent des attributs et de contraintes definis par l'utilisateur, selectionnes par l'utilisateur et/ou determines par l'utilisateur pour des transactions, des comptes, le contenu de comptes et d'autres objets apparentes, ainsi que des systemes qui contiennent des jetons et des pseudonymes pour des numeros de compte et des hierarchies de sous-comptes definis par l'utilisateur. Cette invention concerne en outre un procede et un appareil qui offrent aux utilisateurs la possibilite de transferer la propriete et/ou le controle de leurs avoirs, et de modifier les moyens d'y acceder. Certaines formes preferees de ces procedes et appareils, appelees systemes de gestion d'avoirs perfectionnes, ne necessitent pas la manifestation et le transfert physique des avoirs eux-memes separement. L'utilisateur de tous ces systemes offre des formes nouvelles, traditionnelles ameliorees et electroniques d'activites de vente au detail, de vente en gros, d'offre de prestations, d'offre de cadeaux, de vente aux encheres, d'echange, de jeux, d'investissements, de cautionnement et d'autres activites commerciales et non commerciales.

English Abstract

Consistent with principles of the present invention, a method and system for delivering foreign exchange risk management advisory solutions to a designated market is disclosed. For each user, the disclosed system generates an exposure model that is consistent with that user's risk management policy and a budget/pricing determination made in response to user information and external pricing information. The disclosed system may further operate to determine an appropriate measurement of risk and associated hedge alternative for a user, consistent with economic forecasts, and process a request for a hedge instrument from the user. Various hedge instruments may be analyzed and/or obtained through the disclosed system, including spot contracts, forward contracts, option contracts, and money market instruments. The disclosed system further provides extensive training, compliance and sales related features.

French Abstract

La presente invention concerne un procede et un systeme permettant d'apporter des solutions avisees de gestion des risques sur les placements en devises etrangeres pour un marche donne. Pour chaque utilisateur, ce systeme genere un modele d'exposition coherent avec la

politique de gestion des risques de l'utilisateur et avec une
determination de cours/budget elaboree en reponse a des informations
relatives a l'utilisateur et a des informations exterieures relatives aux
cours. Le systeme de cette invention peut aussi fonctionner de facon a
determiner une mesure appropriee du risque et des alternatives de
couverture associees pour un utilisateur, coherente avec des previsions
economiques, et a traiter une demande d'instrument de couverture emanant
d'un utilisateur. On peut analyser et/ou obtenir divers instruments de
couverture par ce systeme, notamment des contrats au comptant, des
polices a effet differe, des contrats d'option, et des instruments du
marche monetaire. Ce systeme concerne aussi des cours extensifs et des
elements lies aux ventes et a l'observation.

English Abstract

A distributed network system supporting foreign exchange execution is described. The system allows customers to receive competitive price quotes to meet foreign exchange needs from dealers through a multi-bid foreign exchange execution process. This process encourage dealers to place more competitive price quotes while also increasing the number of price quote requests that dealers receive from their customers. The resultant win-win situation, as well as lower handling costs afforded by automatic exchange of settlement information makes the system attractive to both customers and dealers. Embodiments of the invention can operate over packet switched networks such as the Internet using latency monitoring and a mixture of guaranteed quality of service (QoS) and non-guaranteed QoS connections.

French Abstract

L'invention concerne un systeme a reseau decentralise permettant d'effectuer des operations de change. Le systeme permet aux clients de

recevoir des cours competitifs capables de repondre aux besoins de change des agents par un processus d'operations de change multi-offres. Un tel processus encourage les agents a faire intervenir des cours plus competitifs tout en augmentant le nombre de requetes de cours que les agents recoivent de leurs clients. La situation benefique a tous qui en resulte ainsi que les faibles frais de manutention, consecutifs a l'echange automatique d'informations relatives au reglement rendent le systeme attractif a la fois pour les clients et pour les agents. Des formes d'execution de l'invention permettent d'operer sur des reseaux a commutation de paquets tels que Internet, avec utilisation de surveillance de temps d'attente et melange de qualite de service garantie (QoS) et de connexions QoS non garanties.

English Abstract

A distributed network system supporting foreign exchange execution is described. The system allows customers to receive competitive price quotes to meet foreign exchange needs from dealers through a multi-bid foreign exchange execution process. This process encourages dealers to place more competitive price quotes while also increasing the number of price quote requests that dealers receive from their customers. The resultant win-win situation, as well as lower handling costs afforded by automatic exchange of settlement information makes the system attractive to both customers and dealers. Embodiments of the invention can be used to support foreign exchange workflow automation within a business concern. The system can be integrated with other enterprise systems to provide efficient execution that reduces the likelihood of errors, increases oversight of traders, and can reduce trading costs.

French Abstract

L'invention concerne un systeme de reseau distribue permettant l'execution de change de devises. Ce systeme permet aux clients de recevoir des devis competitifs afin de satisfaire les demandes de change de devises provenant des vendeurs via un processus d'execution de change de devises a offres multiples. Ce procede encourage les vendeurs a effectuer des devis plus competitifs, tout en augmentant le nombre de demandes de devis que les vendeurs recoivent de leurs clients. Il en resulte donc une situation ou tout le monde est gagnant, ainsi qu'une reduction des frais de manutention grace a l'echange automatique des informations d'agrement, ce qui rend ce systeme attractif a la fois pour les clients et les vendeurs. Les differents modes de realisation de la presente invention peuvent servir a realiser l'automatisation du processus de change de devises dans une entreprise commerciale. Ce systeme peut egalement s'integrer a d'autres systemes de l'entreprise en question, afin d'optimiser l'efficacite de l'execution, ce qui permet de reduire le nombre d'erreurs possibles, d'accroitre la supervision des negociateurs en bourse et enfin, d'abaisser les couts d'achat.

English Abstract

A computer system and method support foreign exchange (FX) forward trading for both order posting and execution. The system includes a central server for tracking currency trades; a plurality of trading workstations; and at least one remote server interfacing the trading workstations to the central server, with the at least one remote server mediating the currency trades between traders using the workstations by consulting pre-set trading configurations associated with each trader. Currency brokers and traders use the system through a plurality of data input and display screens to deal in currency forwards in an efficient manner. The system and method support both voice and electronic data to interface with existing trading systems such as voice-based networks, permitting order entry anywhere in the world. The system includes features such as the filtering of entities by specified criteria such as bad credit, bad geography, etc. using the pre-set trading configurations associated with each trader, so that such filtered entities are not even displayed to a trader; request for quotes functions, in which up to eight people can be selected and stored in a database who a trader is willing to trade with; and a penalty box for not trading or displaying trades of an annoying trader.

French Abstract

Cette invention se rapporte a un systeme et a un procede informatiques qui prennent en charge les negociations sur les operations de change de devises (FX) a terme, permettant a la fois le placement et l'execution d'ordres. Ce systeme utilise un serveur central suivant les negociations sur les devises; plusieurs stations de travail de negociation, et au moins un serveur distant servant d'interface entre les stations de travail de negociation et le serveur central, le ou les serveurs distants servant de mediateurs pour les negociations sur les devises entre les negociants utilisant les stations de travail, en consultant les configurations de negociation preetablies associees a chaque negociant. Les agents de change et les negociants utilisent ce systeme via plusieurs ecrans d'entree et d'affichage de donnees, pour traiter de facon efficace des operations de change a terme. Ce systeme et ce procede prennent en charge a la fois des donnees vocales et electroniques pour servir d'interface avec les systemes de negociation existants, tels que des reseaux vocaux, permettant ainsi le placement d'ordres partout dans le monde. Ce systeme comprend des fonctions, telles que le filtrage d'entites par des criteres specifiques, tels que le credit de mauvaise qualite, la mauvaise position geographique, etc., en utilisant les configurations de negociation preetablies associees a chaque negociant, de telle sorte que les entites filtrees ne sont meme pas affichees a l'intention d'un negociant; la demande de cours, pour laquelle une base de donnees peut selectionner et enregistrer jusqu'a 8 personnes avec lesquelles un negociant souhaite negocier; et une boite de penalite en cas de refus de negocier ou d'afficher les operations d'un negociant contrariant.

French Abstract

L'invention concerne des procedes de credit-bail pour le financement des ameliorations locatives. Les ameliorations d'un espace loue sont louees par une entite a vocation particuliere a un locataire selon un contrat de concession des ameliorations different de celui du contrat de location de l'espace. L'entite a vocation particuliere peut etre une entite administrative soumise aux lois de la comptabilite fiscale et elle peut etre detenue par un proprietaire de l'espace. Les etats financiers de cette entite peuvent etre regroupes avec ceux du proprietaire. Cette entite peut etre dotee de capitaux permanents grace: (a) a la participation au capital du proprietaire de l'ordre d'au moins trois pour cent de la valeur des ameliorations locatives; (b) a des dettes contractees par ladite entite de l'ordre d'au moins quatre vingt pour cent de la valeur des ameliorations locatives, les dettes etant sans recours contre ladite entite, le proprietaire et les ameliorations, et etant fixees par une entiere obligation de la part du locataire. Ladite entite detient la concession des ameliorations. La realisation des ameliorations locatives peut etre financee par ladite entite. Les loyers entrant en ligne de compte dans le cadre de la concession des ameliorations peut avoir une valeur actualisee au moins egale a la valeur

des ameliorations a la prise d'effet de la concession des ameliorations. La concession des ameliorations peut aller de pair avec le contrat de location de l'espace de maniere a appuyer la conclusion fiscale selon laquelle la location de l'espace et la concession des ameliorations locatives doivent etre traitees ensemble comme un seul contrat de location et que ce contrat doit etre considere comme un contrat de location-exploitation. Les loyers compris dans la concession des ameliorations locatives peuvent etre en totalite deductibles des impots pour le locataire.

English Abstract

A method and system for a business-to-business online auction is described. Bids by participating bidders are specified over multiple contract term segments (e.g., years), and define a pattern of cash payments over time. The auction system converts the defined pattern of cash payments over time into a net present value bid. The net present value bids are used to effect a common basis of comparison between participating bidders.

French Abstract

L'invention concerne un procede et un systeme de vente aux encheres interentreprises, en ligne. Des offres, placees par des participants, sont specifiees sur plusieurs segments de termes de contrat (par exemple les annees) et determinent un calendrier des paiements en especes, dans le temps. Ce systeme de vente aux encheres convertit le calendrier determine de paiements en especes dans le temps, en une offre a valeur actuelle nette, ces offres a valeur actuelle nette etant utilisees pour servir de base commune de comparaison entre participants placant des offres.

French Abstract

L'invention concerne un systeme d'echanges automatise base sur Internet, ce systeme etant destine a gerer l'echange de droits de propriete sur des objets sur un marche secondaire. Dans ce systeme d'echanges automatise, un ou plusieurs echanges accessoires permettent de mettre a jour les informations representant les transactions effectuees sur le marche secondaire et de gerer ces transactions. Ce systeme d'echanges automatise s'articule notamment autour d'un echange accessoire de mise aux encheres d'un portefeuille secondaire, d'un echange accessoire de services de tarification et d'evaluation, d'un echange secondaire de services de negociation de contrats electroniques, et d'un echange accessoire de services de livraison et de controle. Ce systeme d'echanges automatise comporte enfin un gestionnaire de commutation logique destine a lancer des encheres opportunistes a partir d'une transaction portant sur un produit ou un service, de sorte que les encheres montent ou que les prestations de services sont sollicitees sur le meme marche secondaire ou sur d'autres marches secondaires.

English Abstract

An Internet-protocol based anonymous trading system which enables traders to identify bids and offers which they are eligible to trade based upon a color coded methodology which gives the trader credit preference information about the potential counterparty while still maintaining the anonymity of the potential counterparty. To that end, each bid or offer is prescreened against all possible counterparties' credit information in the system and each counterparty sees a unique color coded trading interface based upon their particular credit preference combinations and the others in the system. The system then shows all prices in the system, and the color-coding tells the trader which prices he is able to trade, and also shows him the full depth of the market, including those the trader is unable to trade.

French Abstract

Système de négociation anonyme basé sur un protocole Internet, qui permet à des négociateurs d'identifier les soumissions et les offres pour la négociation desquelles ils sont éligibles. Le système est basé sur une méthodologie de codes de couleurs, qui donne au négociateur des informations de préférence de crédit sur les contreparties éventuelles, tout en conservant l'anonymat desdites contreparties. À cet effet, chaque soumission ou offre est préalablement examinée à la recherche de toutes les informations de crédit des contreparties du système, et chaque contrepartie voit une interface de négociation avec un code d'une seule couleur sur la base de ses propres combinaisons de préférences de crédit et de celles des autres participants au système. Le système présente ensuite tous les prix, et le codage par couleurs indique au négociateur quels prix il est capable de négocier et lui montre la totalité du marché, y compris les prix qu'il est incapable de négocier.

English Abstract

A system and method is provided for linking a Rolling Spot Currency contract (i.e. futures contracts in the foreign exchange market) with a Principal Market Maker (i.e. quoter) specialist program designed to replicate an over-the-counter bank trading environment by merging a combined trader and broker, with a traditional futures pit trading environment. The link includes a Principal Market Maker (PMM) computer (12), a computer (10) coupled to computer (12) for trading rolling spot

currency, a conventional electronic brokerage and trading network (14) such as the REUTERS trading system, a limited access network (26) used by non-professional traders, and a clearing facility (48), which is coupled to PMM computer (12), computer (10), network (14) and limited access network (26) to confirm and settle trades executed by PMM computer (12). These elements of the link are coupled to PMM computer (12) to receive and transmits bids and offers for international currency trading.

French Abstract

Cette invention se rapporte a un systeme et a un procede permettant de lier des contrats d'echange de devises au comptant (c'est-a-dire des contrats de valeurs a terme du marche des changes) a un programme mainteneur de marche principal (c'est-a-dire un programme de definition de cotes) specialise, concu pour reproduire un environnement commercial bancaire hors-cote par fusion de l'association d'un negociateur et d'un courtier avec un environnement de commercialisation par vente aux encheres de valeurs a terme. Ledit systeme de lien comporte un ordinateur mainteneur de marche principal (PMM) (12), un ordinateur (10) couple a l'ordinateur precedent (12) pour executer des transactions d'echange de devises au comptant, un reseau electronique classique de courtage et d'execution de transactions (14) tel que le systeme REUTERS, un reseau d'accès limite (26) utilise par les negociateurs non professionnels, et une fonction de compensation (48) qui est couplee a l'ordinateur PMM (12), a l'ordinateur (10), au reseau (14) et au reseau a acces limite (26) pour confirmer et solder des transactions executees par l'ordinateur PMM (12). Ces elements du lien sont coupls a l'ordinateur PMM (12) pour recevoir et emettre des soumissions et des offres en vue de l'execution de transactions monetaires internationales.

English Abstract

This invention describes a computer-based system (112), methods and visual interfaces for providing an integrated development and deployment framework for visual modeling and dynamic simulation of virtual models of complex systems, which can be further integrated with monitoring (108) and control (138) devices to monitor and control the operation of the complex systems modeled (102) and can be used for information retrieval.

More particularly, the virtual models in the present invention relate to visual models of biochemical complex systems, comprising sets of icons representing processes and their participants linked into multidimensional pathways (116), further organized in a hierarchy of icons representing discrete time and space compartments, wherein such compartments may contain other compartments, and wherein those modular icons encapsulate in different layers all the information, data, and mathematical models that characterize and define each virtual model.

French Abstract

L'invention porte sur un systeme informatique (112), sur un procede et sur des interfaces representant un cadre de developpement et de deploiement pour le modelage visuel et la simulation dynamique de modeles virtuels de systemes complexes pouvant ensuite etre integres a des dispositifs de controle (108) et de commande (138) d'exploitation des systemes complexes ainsi modeles (102) et peuvent etre utilises pour la recherche d'informations. Les modeles virtuels de la presente invention peuvent se rapporter a des modeles visuels de systemes de complexes biochimiques comprenant des ensembles d'icomes representant des processus et leurs participants lies par des chemins pluridimensionnels (116) qui sont ensuite organisees selon une hierarchie d'icomes representant des compartiments discrets dans le temps et dans l'espace, lesdits compartiments pouvant en contenir d'autres et lesdites icomes modulaires pouvant englober dans differentes couches toutes les informations, donnees et modeles mathematiques caracterisant et definissant chacun des modeles virtuels.

English Abstract

A system and method of accepting risk (14) through contractual obligations, then transferring all or a portion of the risk to investors

which includes a means of absolute assurance of timely payment to contractholders, and segregation of the interests of particular investors to specifically identified risks in a risk to capital matching system. Segregated reserves are used to tailor particular products for specific needs and, in particular, the need of transferring difficult to place risks. Agreements are created which promise payments, based on loss from risks including investment risk such as unexpected stock dividend changes; variations in returns on marketable debt obligations and currency fluctuations (13). The entity provides a unique service of guaranteeing payments for losses and investment performance payments by setting aside reserves fully adequate to meet the maximum of each and every obligation (14).

French Abstract

La presente invention concerne un systeme et un procede d'acceptation de risque (14) par des obligations contractuelles, et de transfert ulterieur de tout ou partie du risque a des investisseurs. Le systeme comporte un moyen d'assurance absolue du paiement ponctuel aux parties contractantes et d'affectation exclusive des interets d'investisseurs determines a des risques identifies de maniere specifique, dans un systeme de correspondance entre risque et capital. Des reserves distinctes sont utilisees pour realiser sur mesure des produits particuliers destines a des besoins specifiques et, en particulier, la necessite de transferer des risques difficiles a placer. Des accords sont crees, qui promettent des paiements, bases sur les pertes dues a des risques, dont les risques d'investissement tels que les variations imprevuees des dividendes en actions, les variations de rendement sur les titres de creance de placement et les fluctuations des cours des devises (13). L'ensemble donne un service unique de garantie des paiements pour pertes et des paiements d'execution d'investissements, grace a la constitution de reserves entierement appropriees pour faire face au maximum de tout titre (14).

Fulltext Word Count: 41169

English Abstract

Methods and apparatus which deal with the management of risk relating to specified, yet unknown, future events are disclosed. "Sponsor" stakeholders (12) specify a particular product relating to an event or phenomenon for which there is a range of possible future outcomes. "Ordering" stakeholders (13) then offer contracts relating to the predetermined phenomenon and corresponding range of outcomes. The offered contracts specify an entitlement (or pay-off) at the future time of maturity for each outcome, and a consideration (or premium) payable, in exchange, to a "counter-party" stakeholder (14). Independently of the offered contracts, the "counter-party" stakeholders (14) input data as to their view of the likelihood of occurrence of each outcome in the predetermined range into the future, or specifically at the predetermined date of maturity. Each offered contract is priced by the processing units (20) by calculating counter-party premiums from the registered data, and a match attempted by a comparison of the offered premium with the calculated premiums. Matched contracts can be further traded until maturity, and at-maturity processing handles the exchange of entitlement as between the matched parties to the contract.

French Abstract

Le procede et l'appareil decrits permettent d'assurer la gestion de risques concernant des evenements a venir et jusqu'alors inconnus. Les participants "garants" (12) fournissent la description d'un produit specifique concerne par un evenement ou un phenomene pour lesquels on peut predire plusieurs issues. Les participants "ordonnateurs" (13) proposent alors des contrats prenant en consideration le phenomene tel qu'il a ete defini et l'ensemble des issues previsibles. Les contrats proposes specifient un droit (ou un dedommagement) a l'echeance de chacune des issues a venir, et une provision (ou indemnite) dus, en compensation, a un participant "contrepartie" (14). Independamment des contrats proposes, les participants "contrepartie" (14) introduisent des donnees precisant leurs leurs estimations soit quant a la probabilite de survenue de chacune des issues previsibles, soit, de facon plus specifique, quant a cette survenue a la date d'echeance prevue. Le calcul du prix de chacun des contrats est effectue au moyen d'unites de traitement (20) qui calculent les indemnites des contreparties a partir des donnees enregistrees, et un essai d'adaptation est realise sur la base d'une comparaison entre les indemnites offertes et les indemnites calculees. Les contrats ayant fait l'objet d'une telle adaptation peuvent ensuite donner lieu a renegotiation jusqu'a la date d'echeance. A la date d'echeance, le traitement informatique assure la compensation des droits entre les parties au contrat concernees par l'adaptation.

The development of regulatory strategies to reduce concentrations of ambient ozone have involved enormous expenditures over the last twenty-five years, but has produced little discernible **benefits**. This paper evaluates the development of this policy in the Northeast and suggest measures for regulatory reform. These measures are derived from a detailed analysis that compares the current regulatory strategy to an alternative strategy that meets the same environmental standards at a lower cost.

The development of regulatory policy can be characterized as following a procedure of uniform regulations and uniform cost burden. This framework falls short of accounting for the spatial effects and reactivities by species on ozone formation. The development of an analytical method that combines the science of ozone formation with the economics of emission control programs shows that the cost effectiveness of emission control strategies can be significantly improved.

The combined framework is applied to the northeastern region of the USA, with a primary focus on the Greater New York Metropolitan Area (GNYMA). The results indicate a combined cost savings of 80 percent for New York, Pennsylvania and New Jersey over existing regulatory proposals to achieve the same reduction of ozone in GNYMA. Cost savings are achieved through weighted emissions **trading**, and the emission weights act like a **currency exchange** to relate different sources of emissions to a common measure of ozone. Emission reductions selected under weighted emissions **trading** focus on the control of mobile and off-road sources along the eastern seaboard and elevated emissions from utility and industrial boilers in upwind regions to the south and west of the GNYMA.

The efficient strategies suggest a more regionally adaptive control strategy is preferable. This requires the establishment of regional air pollution control districts that act in concert to meet environmental objectives, there are potentially large litigation costs to drawing boundaries for the control districts. Overcoming these indirect costs of regulation requires is legitimate if the potential cost savings are large. This dissertation shows that this is the case for the Northeast if one considers strategies that go beyond existing federal controls.

AN EMPIRICAL INVESTIGATION INTO THE APPROPRIATE FOREIGN EXCHANGE RATE
ARRANGEMENT (EXCHANGE RATE REGIMES, GULF COOPERATION COUNCIL)
Author: AL-AITANI, MUHAMMAD YOUSEF SHARIF
Degree: PH.D.
Year: 1996
Corporate Source/Institution: THE GEORGE WASHINGTON UNIVERSITY (0075)
Source: VOLUME 56/12-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 4842. 415 PAGES

This study evaluates alternatives of **exchange** rate regimes or arrangements to predict the most appropriate arrangement that is economically and politically feasible for the Gulf Cooperation Council (G. C. C.) States to adopt for the purpose of coordinating their **exchange** rate policies.

The findings of this study indicate that pegging G. C. C. currencies to the Special Drawing Rights (SDR) basket would be the most economically and politically appropriate **exchange** rate arrangement for the G. C. C.

States. Moreover, the economic characteristics of these states indicate that they are not ready at their current stage to form a full monetary union. However, these states are economically qualified for **several** forms of partial **monetary** integration, such as an **exchange** rate coordination arrangement, a payments union, a parallel currency, a reserve-pooling arrangement, and capital market integration.

This study also concludes that the expected costs and **benefits** to the G. C. C. States of the formation of an **exchange** rate coordination arrangement are limited to those resulting from the creation of a full monetary union. This is especially true because of the slow growth of intra-G. C. C. trade. Several important steps are suggested in this study to enhance this trade. These steps are also very likely to result in a faster realization of the **benefits** of this arrangement. For the time being, however, the adoption of such an arrangement is still very important. This is because it represents an initial commitment by the G. C. C. States to work together towards more monetary integration and perhaps towards the formation of a single currency area at a later stage when the necessary conditions are met.

The most obvious policy implication of this arrangement is that once these states agree to fix their **exchange** rates, then each country will be very limited in using its own **exchange** rates as a monetary instrument for correcting any imbalance or deficit in its balance of payments. Another implication is that these states should be prepared to subsidize or finance such an imbalance or deficit of another member when that member is unable to correct its imbalance or finance its deficit through other policies or means.

For the distribution of costs and **benefits** that result from the economic cooperation among these states, it has been pointed out in this study that political compromise is a very important element of this distribution, especially because these states are not equal in terms of economic dominance and/or economic development. Moreover, this study also concludes that the most appropriate method of compensation for the G. C. C. States regarding the uneven distribution of costs and **benefits** is the method currently being used. Under this method, compensation is made through fiscal **incentives** and policies.

In conclusion, the cooperation strategy of the G. C. C. States' for achieving monetary and economic integration, which has been adopted by the G. C. C. since its formation, is endorsed in this study. This is because the one-step or centralization strategy of monetary integration is not consistent with the political systems of these states. (Abstract shortened by UMI.)

Chairman: LARS TYGE NIELSEN
Source: VOLUME 56/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 1473. 141 PAGES

I. **Exchange** rate and term structure dynamics and the pricing of derivative securities. We develop a two-factor international general equilibrium model of **exchange** rates and the term structures of interest rates in two countries. The two state variables, which are the same for both countries, are the instantaneous interest rates in the two countries.

The term structures are correlated through an explicit dependence of the yields of each country's bonds on the interest rate in the other country. We present a partial differential equation for valuing **exchange** -rate and interest-rate sensitive contingent claims, and we derive closed-form expressions for **discount** bonds, forward **exchange** rates and futures **exchange** rates.

II. The dynamics and the term structure of risk premia in foreign **exchange** markets. We develop a three-factor continuous-time model that provides an endogeneous characterization of the dynamics, the term structure and the predictability at various horizons of risk premia in foreign **exchange** and bond markets, and of the interrelations between the risk premia of these markets. The model also provides a full characterization of the stochastic processes followed by the **exchange** rate, the term structures of interest rates earned in the two currencies, and of the interdependencies between these processes. We find a class of discrete-time processes that converge in distribution to the continuous-time processes of the theoretical model, which (1) facilitates the intuitive reasoning about the economic implications of the model, (2) provides an interesting econometric specification that can be easily compared with the traditional empirical literature on foreign **exchange** returns and (3) makes easier the pricing of derivative securities by Monte Carlo simulation. The first- and second-order moments of the forward **exchange** risk premia appear to be well described by the discrete-time processes derived from our theoretical model. Finally, we show that the cross-sectional restrictions imposed on the term structure of forward risk premia by our model cannot be rejected.

III. On the characterization of **exchange** rate dynamics. This paper presents a broad class of parametric models of the dynamics of **exchange** rates between **different** **currencies**, the instantaneous interest rates earned in these currencies and the interrelationships between these various processes. Then, we characterize a class of discrete-time processes that converge in distribution to the continuous-time processes of the theoretical model as the length of the discrete time intervals goes to zero. Finally, proceeding as if the data were generated from these discrete-time models, we show how to obtain maximum likelihood estimates of the parameters of the models.

THE SPECIFICATION AND IDENTIFICATION OF "NEWS" IN THE MONETARY VIEW OF EXCHANGE RATE DETERMINATION (INTERNATIONAL FINANCE, FOREIGN EXCHANGE , MONETARY MANAGEMENT)

Author: ZHENG, ZHEWU

Degree: PH.D.

Year: 1994

Corporate Source/Institution: AUBURN UNIVERSITY (0012)

Director: JOHN D. JACKSON

Source: VOLUME 55/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2935. 157 PAGES

This study examines **several** issues concerning the **monetary** view of **exchange** rate determination. This view suggests that **exchange** rates are determined in direct proportion to the ratio of money supplies between two countries, and in inverse proportion to the ratio of money demands in the two **trading** countries. After reviewing the literature on the monetary view of **exchange** rates, this research **points** out three potential shortcomings of this approach. These shortcomings are as follows: First, an ex post method is used in the monetary approach to generate economic "news" in lieu of an ex ante method. An ex ante method may shed light on why

"news" measures have failed in prior studies that used the ex post methodology. Second, traditional models have confined themselves to only unanticipated changes in money supplies, real incomes, and nominal interest rates when predicting **exchange** rate movements. This study considers other potential variables that may play a role in the volatile behavior of **exchange** rates. Finally, most existing evidence conclude that the foreign **exchange** market is efficient, suggesting the insignificance of "news" in affecting the market forecasting error. But, our theoretical and empirical results suggest that this implication may be the result of misspecified models, in the sense that third country "news" has been excluded. This study considers the effects of third country "news" on the volatility of **exchange** rates in detail.

The empirical evidence obtained in the study suggests that the third country "news" and four additional "news" measures significantly increase the explanatory power of empirical specifications of the testable theoretical framework. This significance holds for both ordinary least squares and the more appropriate seemingly unrelated regression estimates.

This study advances our knowledge of **exchange** rate determination by filling three gaps in the literature on the monetary view. Defining "new" based on ex ante expectations, adding new variables to the model, and including third country "news" are all found to significantly improve the explanatory power of monetary models of **exchange** rate determination.

ESSAYS ON MONEY AND ASSET PRICES (CURRENCY SUBSTITUTION)

Author: TURTELBOOM, BART GERARD

Degree: PH.D.

Year: 1994

Corporate Source/Institution: COLUMBIA UNIVERSITY (0054)

Adviser: RICHARD H. CLARIDA

Source: VOLUME 55/06-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1647. 167 PAGES

The first chapter reviews the vast literature on currency substitution. We first observe that "currency substitution" is an imprecise concept, and therefore begin by proposing the distinction between currency substitutability--the ability and willingness of economic agents to satisfy their needs for a unit of account, medium of **exchange** and store of value with **different currencies**--and **currency** substitution--the equilibrium outcome of the process in which one currency replaces another. This distinction is useful since the theoretical and empirical literature often fails to recognize that one does not expect either one to imply the other. Data problems preventing a useful measurement of currency substitution are discussed and the available evidence is reviewed. This chapter also reviews the very large empirical literature attempting to estimate currency substitutability, by highlighting the problems of interpretation in the models that have been estimated. Finally, it considers the policy problems stemming from currency substitution and the ensuing instability of monetary aggregates.

The second chapter incorporates these currency substitution effects in a two-country general-equilibrium asset pricing model. As is documented extensively in chapter one, increased currency substitution leads to a higher instability of **exchange** rates and interest rates. This chapter addresses this issue from an empirical angle. Rather than estimating reduced form portfolio equations, we simulate a two-country cash-in-advance economy. However, we apply the cash-in-advance constraint only to a subset of goods in each country and allow for the rest to be paid with **credit** in either currency. This approach captures the institutional aspects of

currency substitution nicely and puts an upper bound to the degree of currency substitution. Simulation results for two pairs of countries--United States-United Kingdom and United Kingdom-France--show that this avenue is fruitful in tracking **exchange** rate moments observed in these countries and substantially improves upon the standard model.

The third chapter motivates money demand through the need to pay taxes with legal tender. One of the reasons why people hold money is that they are compelled to do so by governments. This chapter explores a model where money demand arises from the legal requirement to settle transactions with the government in cash. As an illustration, we simulate the model for Brazil during 1975-1992. We compare the performance of the model to generate the observed volatility in consumption velocity during 1975-86 (relatively low inflation) and 1987-1992 (the high-inflation years), and show that it differs substantially in the two subperiods.

**MARKET IMPERFECTIONS AND THE PRICING OF SHORT TERM TREASURY SECURITIES:
THREE ESSAYS (SECURITIES PRICES)**

Author: GERARD, BRUNO ROBERT

Degree: PH.D.

Year: 1991

Corporate Source/Institution: UNIVERSITY OF CALIFORNIA, LOS ANGELES (0031)

Chair: EDUARDO S. SCHWARTZ

Source: VOLUME 52/07-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 2659. 242 PAGES

This research investigates the effect of taxes, transaction costs, and **auctions** on the quoted prices of short term Treasury securities. In each essay we identify a set of near substitute securities identical in all characteristics except with respect to the market imperfection under investigation. Using a simple no arbitrage approach, sharp predictions about the price differences between the **matching** sets of securities are derived by modelling closely the effect of taxes, transaction costs and **auction** induced liquidity changes on quoted prices.

The first essay examines the effect of taxes on the prices of a set of bonds with less than 12 months to maturity and portfolios of 6 and 12 months bills maturing respectively on the last coupon date and on the maturity date of the bond. The two portfolios yield identical pre-tax **cash** flows but markedly **different** after-tax **cash** flows and tax options to different classes of investors. The evidence suggests that short term Treasury securities prices are set by investors who benefit from the preferential tax treatment of long term capital gains and who assign significant value to the tax timing options conferred by the Tax Code.

The second essay investigates the effects of transaction costs and liquidity on the prices of bonds with less than 6 months to maturity and bills maturing on the same date. Although similar in all other respects, the two securities trade at markedly different volume and transaction costs. Using quotes from both Salomon and the New York Fed, the study supports the hypothesis that liquidity characteristics affect strongly the quotes and returns of short term Treasury securities. The investigation suggests also that composite quotations (Fed quotes) or individual dealers mid quote prices are biased measures of the market value of securities.

The third essay investigates the symmetry of **bid** and ask premiums and the extent to which seasoning and **auction** induced variations in the premiums biases the quoted prices. Systematic asymmetries in the quoted ask and **bid** premiums are documented, inducing significant biases in the mid quote as a measure of bill value. Further the biases differ significantly

between **auction** and non **auction** weeks. Bond or bill quote data that include a large number of **auction** week quotes are subject to severe biases. Alternative sampling procedures free of bias reversal are suggested.

THE QUALITY OF PRIVATE PAPER MONEY AND THE AMERICAN FREE BANKING EXPERIENCE (BANKING, MONETARY HISTORY)
Author: LEUNG, SIU-KI
Degree: PH.D.
Year: 1991
Corporate Source/Institution: UNIVERSITY OF CALIFORNIA, LOS ANGELES (0031)
Chair: AXEL LEIJONHUFVUD
Source: VOLUME 52/06-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 2232. 206 PAGES

This dissertation studies the quality of privately issued paper money, by which we mean how well paper money serves the purpose of facilitating monetary **exchanges**. We show in a two-period asset pricing model that the conflict of interests under limited liability between the issuer and holders of private paper money could lead to an instability in the value of paper money, which depreciates its quality. We examine in detail, with the help of an antebellum banking data set constructed from state banking reports submitted to the Secretary of the Treasury, the historical episode of the American free banking era during which a number of state legislatures granted freedom of entry into the business of issuing paper currency. It is found that banks in these free banking states compared with those in the conventional chartered banking states tended to have lower capital to total liabilities ratios, higher stock to total assets ratios, as well as higher rates of bankruptcy, and that these free banking states had lower per capita currency circulations and higher per capita deposits with banks that were not allowed to issue currency. These systematic differences between free banking and chartered banking states are all consistent with the implications of our theoretical model. In light of the theory and empirical findings we resurrect a hitherto much neglected early strand of monetary thought that concerned itself with the vulnerability of private paper money as a species of **credit**, and clarify mistaken views of Adam Smith's much criticized recommendation of basing the supply of bank money on the discounting of real bills, commonly known as the real bills doctrine. The recent related literature of the so-called New Monetary Economics is critically evaluated. We also propose that a scarcity of **money** may arise if **different** media of **exchange** are less than perfectly substitutable among themselves, and confirm through a number of statistical tests that money scarcity constituted the cause of the American free banking movement.

MACROECONOMIC DISTURBANCES AND ASSET INTERRELATIONSHIPS AFFECTING CHILEAN AGRICULTURE AND INDUSTRY FROM 1974 TO 1984 (INTERNATIONAL; MONETARY; OPEN ECONOMY)
Author: BERNINSONE, ROSA MARIA
Degree: PH.D

Year: 1987

Corporate Source/Institution: UNIVERSITY OF CALIFORNIA, DAVIS (0029)

Source: VOLUME 48/08-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2110. 193 PAGES

This research evaluates the impact of monetary policy, **exchange** rate policy and foreign shocks on the Chilean economy between 1974 and 1984, with particular emphasis on the agricultural and industrial sectors. The foreign shocks are changes in foreign industrial and agricultural prices, foreign income and foreign interest rates. It thus provides a testable framework for the analysis of the impact of macroeconomic changes on agriculture with special emphasis on financial markets. One of the main objectives of the research is to clarify whether the 1982 recession could have been avoided with **alternative monetary** and **exchange** rate policies and to what extent it was of external origin. The hypothesis of ineffectiveness of monetary policy in this small economy with an open capital and trade account is tested. The theoretical framework is constructed in the tradition of the portfolio approach and tested using quarterly data and OLS technique. Ex-post historical simulations are performed in order to evaluate the structural specifications of the model and to examine the response of the most important endogenous variables (sectoral output and prices) to changes in foreign and policy variables. It is concluded that the fixed **exchange** rate and the inactive monetary policy undertaken since 1979 hurt the Chilean economy. External shocks appeared to be a minor influence for the period 1979-1982. A sustained rate of growth of domestic **credit** at lower levels than the actual would have led to an expansion in output and provided a more stable economy. Evidence did not support that changes in net domestic **credit** are offset by changes in net foreign assets. However, increases in GNP lead to large reductions in foreign **exchange** due to the high marginal propensity to import and that nationals tend to invest in foreign assets as income increases. A gradual liberalization process would have been more appropriate. Most of the fall of GNP that took place between the end of 1981 and early 1983 seems have been the result of lack of confidence in the financial system and the economy.

A STUDY OF FOREIGN EXCHANGE FUTURES MARKETS

Author: LEE, HAHN KOO

Degree: PH.D.

Year: 1984

Corporate Source/Institution: KANSAS STATE UNIVERSITY (0100)

Source: VOLUME 46/01-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 213. 284 PAGES

Conditions for futures markets to survive have been addressed through micro analysis. In pursuit of their objectives hedgers compare the relative volatility of either futures prices or of "basis" to that of spot prices for their decisions. Speculators seek markets which present fluctuating futures prices, wide "basis", low transaction costs and many cases of uncovered interest arbitrage.

Equilibrium pricing models are examined under the assumption of utility maximization by each market agent. Empirical tests of (1) whether hedgers have paid prices higher than expected for futures contracts, and (2) whether hedgers have realized sufficient hedging **benefits** in real transactions, suggest that hedgers present the dominant type of market agent in foreign **exchange** futures markets. Another empirical test of whether the hedged ratio exhibits a positive relationship with hedging

effectiveness shows mixed results.

Findings of this study further suggest that even if there were not "unexpected shocks" during hedging periods, futures rates still could not be expected to be at the same level as expected future spot rates.

Empirical tests made in the study support hypotheses of randomness of error terms and normally distributed unexpected shocks in foreign exchange futures markets. Unexpected shocks in foreign exchange futures markets of three currencies with quite different characteristics were found to be normally distributed, while "expected shocks" were found to be serially autocorrelated. Therefore "total shocks" can not be assumed to be normally distributed, as most past studies have done.

The concept of market efficiency in futures markets is analyzed by comparison with similar concepts, and new test methods are suggested for avoiding ambiguity problems. Three different empirical tests of market efficiency all strongly support efficiency of futures markets for the three foreign currencies studied.

THE CHOICE OF AN OPTIMUM EXCHANGE CURRENCY REGIME FOR A DEVELOPING ECONOMY (THE CASE OF THE WEST AFRICAN MONETARY UNION)

Author: NASCIMENTO, JEAN-CLAUDE ANATOLE

Degree: PH.D.

Year: 1981

Corporate Source/Institution: STATE UNIVERSITY OF NEW YORK AT ALBANY (0668)

Source: VOLUME 42/10-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 4534. 214 PAGES

The adoption of a generalized float among the major currencies following the collapse of the Bretton Wood system, a growing worldwide inflation initiated in the sixties and the use of monetary policy as a tool of economic development in developing countries call for a reassessment of a number of developing countries' fixed single-currency peg as the best exchange currency regime in terms of promoting domestic monetary stability. The West African Monetary Union, which currency--the CFA franc--is currently pegged to the French franc, is an illustration of this issue.

The object of this study is then two-fold--One is to find the optimal exchange currency regime for the West African Monetary Union. The alternative exchange currency regimes investigated are: a crawling single-peg to the French franc, a fixed and a crawling trade-weighted basket peg. The optimum exchange currency regime is determined by comparing the net benefit of each alternative exchange currency regime relative to the current single currency peg to the French franc and by selecting the one with the highest net benefit relative to the single-peg currency regime. The net benefit for each currency regime is derived by evaluating on one hand its major cost reflected by the degree of monetary (in)dependence exercised by the monetary authorities of the developing countries in their attempt to control the domestic monetary aggregate; and on the other hand its major benefit is reflected by the degree of liquidity of the Union's domestic currency. The second aspect of this study consists in determining whether or not the real value of the Union's domestic currency has been stabilized during the floating era. Given that the reserve currency of the West African Monetary Union is the French franc and that, it is the French monetary authorities which manage the stabilization policy of the reserve currency of the Franc zone (and thereby of the currencies pegged to the French franc), the other aspect of

this study is to assess the performance of the French monetary authorities' intervention policy in the foreign **exchange** market. The link between these two aspects of the present study resides in the fact that a failure by the French monetary authorities to stabilize the real value of the CFA franc constitutes, for the Union, an additional cost in maintaining its current **exchange** currency regime.

The major empirical results show that: (1) the real value of the CFA franc have failed to be stabilized by the French monetary authorities despite their active management policy of the reserve currency (i.e., the French franc) in the foreign **exchange** market; (2) the optimum **exchange** currency regime for the West African Monetary Union is a fixed trade weighted basket peg.

The main conclusion of the paper is that the West African Monetary Union should abandon its current currency regime and adopt a fixed trade weighted **exchange** currency regime.

A SHORT RUN MACROECONOMETRIC POLICY MODEL FOR BRAZIL

Author: ASSIS, MILTON PEREIRA DE

Degree: PH.D.

Year: 1980

Corporate Source/Institution: THE JOHNS HOPKINS UNIVERSITY (0098)

Source: VOLUME 41/03-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 1135. 336 PAGES

This research is an empirical study of the Brazilian economic structure and the impact effect of macroeconomic stabilization policies. The short-run macroeconomic policy model used in this study is a non-linear dynamic system of 45 simultaneous equations, an equal number of endogenous variables, and 40 predetermined variables. The estimations were made using 28 annual observations for the period from 1948 to 1975.

The institutional context is presented together with the analysis of the government budget restraint flows from 1948 to 1976 in Chapter 2. This chapter also analyzes the growth of the banking system and defines the policy instruments available to the government.

The economy's assets are distributed among four sectors: private banks, private non-banks, federal government, and foreign. In Chapter 3 the markets for each of the considered financial assets are specified according to the portfolio approach and assumed in equilibrium. The statistical analysis of the OLS estimations as well as the economic relevancy of the estimated parameters determine the financial sector behavior equations candidates for the macroeconomic model. The same type of procedure is used in Chapter 4 to analyze the real sector of the economy.

In Chapter 5 the macroeconomic model is specified following the general equilibrium approach and estimated by the modified 2SLS method using principal components. In this model the stock of unborrowed high-powered money is an economic policy instrument determined endogenously by the government budget restraint equation. The economic policy instruments under government control are nominal taxes; nominal government expenditures, securities and subsidized loans to the private sector; the required reserve ratios on demand and time deposits; the **discount** rate; the interest rate on time deposits; and the foreign **exchange** rate. In all, considering the **different** forms of financing **monetary** and fiscal policy, there are 15 economic policy instruments in the model under government control. In the model there are a series of links between the financial and real sectors. The interest rate on government securities and **credit** availability are arguments of the private investment function. Real

disposable income appears in the private non-bank financial asset demand, the interest rate on time deposits appear in the private consumption function, and the government budget restraint equation also links the monetary and real sectors.

The policy conclusions in Chapter 6 follow from the net impact effects of the economic policy instruments in the reduced form equations estimated from the 2SLS estimation of the model. It is found that the net impact effects of monetary and fiscal policy depend on the form of financing through the government budget restraint equation. This is the first study for Brazil which has recognized and estimated the impact effects of economic policies according to the type of financing. The most powerful economic policies in relation to the impact effects on nominal aggregate demand and on prices are changes in government expenditures financed, in decreasing order of importance, by changes in the supply of unborrowed high-powered money, government securities, and government subsidized loans to the private sector.

The net impact effects of economic policies on the real sector are rather small. The most powerful effect on real income results from changes in government loans to the private sector financed by high-powered money. The next most powerful effects on real income result from changes in taxes and in government expenditures financed by high-powered money. Changes in government expenditures financed by high-powered money have the most powerful effect on the balance of trade and on the real quantity of money. It is also found that the effects of different economic policies on the output composition are different with larger or smaller participation of the government in the economy. In the last part of Chapter 6 fixed target policy models are discussed and five exercises are solved. These exercises show that economic policies are interdependent, i.e., the values of the policy instruments depend not only on the fixed targets but also on the set of instruments considered. They also provide a check on the capability of the used macroeconomic model to provide meaningful economic policy suggestions.

The introduction and a summary conclusion of this dissertation are presented in Chapter 1.

Treatment: Practical (P)

Abstract: The author discusses the way Forth handles integers. Integers are numbers from -32768 to 32767. This range of numbers is most convenient to be stored and processed in Forth. It is very surprising that many real-world problems can be represented and solved using numbers in this range. Forth can handle larger numbers, and even floating-point numbers, but these are topics outside the scope of this lesson. The first example he uses to demonstrate how numbers are used in Forth is a money exchange program, which converts money represented in different currencies.

ABSTRACT: Presses on left and right buttons by undergraduate students occasionally produced points exchangeable for money, according to a multiple random-ratio random-interval schedule. During interruptions in the schedule, the subjects were required to fill out sentence-completion guess sheets about how they should press the buttons to gain the points available. Three of six subjects were instructed about the rules of button pressing (the instructed group),

whereas the others received no instructions but their gusses were shaped with differential **points** also worth money (the shaped group). The schedule was changed so that button pressing relying on the instructed or shaped rules substantially decreased the available **points** in the contact condition but not in the no-contact condition. A schedule change in the no-contact condition produced no performance change in either groups. In the contact condition, shaped group subjects showed a performance change, whereas instructed group subjects did not until they temporarily encountered an extinction schedule. When the no-contact condition was reintroduced, sensitive responding occurred in the shaped group but not in the instructed group suggesting that prior experience in the contact condition increased the schedule sensitivity of the shaped group. The findings clearly demonstrated that responding was more sensitive to schedule changes when the rules were shaped than when they were instructed. (author abst.)

ABSTRACT: Article included in a special issue devoted to current developments in electronic publishing and electronic information communication. Scientific disciplines have their own requirements for maintaining detailed structured records of their fields of inquiry. Each discipline develops its own technical terminology, experimental protocols, data storage and retrieval methods. Often these conventions are specific to a particular subdiscipline, geographical area, laboratory or individual and considerable effort is required to **exchange valuable** information between **different** groups. Reports work of the International Union of Crystallography to devise an appropriate standard for classifying and exchanging information across the entire field. Illustrates how the results will **benefit** not only scientists at the laboratory bench, but also publishers, librarians, database maintainers and other providers of information to that community. Reviews the specifications for the universal data **exchange** mechanism, implementation of routines to facilitate data **exchange**, and the use of standard software packages as a medium for submission of papers electronically. (The author may be contacted by electronic mail bm@iucr.ac.uk). Original abstract-amended. LT.

Mondial: mighty accounting muscle for \$199
Yakal, Kathy
PC Magazine , March 15, 1994 , v13 n5 p52, 1 Page(s)
ISSN: 0888-8507
Company Name: M-USA Business Systems
Product Name: Mondial
Presents a favorable review of Mondial 1.0 (\$199.95), an accounting program from M-USA Business Systems Inc., Dallas, TX (800, 214). The

program requires 640K RAM, 4MB hard disk space, and DOS 3.3 or later. The program may be too powerful for small businesses with uncomplicated accounting needs and it is probably too complex for novice users. In addition to the standard modules--General Ledger, A/R, A/P, and Inventory--it includes Order Entry, Point of Sale, Assembly Control, Job Costing, and Purchase Order in addition to multi - currency conversion. It includes 23 pre-built Charts of Accounts and can import data in ASCII, Pacioli 2000, and Quicken's .QIF format. Modules are more flexible and offer more features than other low-end programs. It is network-ready and provides nine levels of password security. It provides flexible reporting to the screen, a printer, a file, or by export as an ASCII file. Includes two screen displays. (djd)

Groups subjects participated in a series of 30 noncooperative independent single-trial resource dilemmas. On each trial the subjects in each group requested privately a number of points from a common pool. Individual request were granted if and only if the total group request was equal to or smaller than the pool size. The pool size on each trial was sampled randomly from a uniform distribution that was common knowledge. Asymmetry in payoff was induced by assigning to each group member a different points -to- money exchange rate.

Shopping for the best deal
Schriener, Judy;
ENR v. 235 (Oct. 16 1995) p. 12
DOCUMENT TYPE: Feature Article ISSN: 0891-9526

ABSTRACT: In an effort to raise money for new road construction, the Arizona Department of Transportation (ADOT) board members opted for a negotiated sale of bonds instead of a low bid. The result, according to Linda Brock-Nelson, chairperson of the ADOT board, was a good deal for ADOT because money was saved and a successful bond offering was obtained several months before the money was needed.

Include relative effectiveness with other media when planning sales calls.
Journal of Advertising Research February, 1979 p. 17-211

... one sales call is worth perhaps four ad exposures. Allocating funds to advertising or personal **selling** depends in part on the firm's communications objectives; however, there also exists a 'considerable gray area in which advertising or personal **selling** could be appropriate for

the communication task.' It is this area which Swinyard addresses his...

... advertising; however, Swinyard's study found that four ads were much more effective than personal **selling** in producing recall, as well as in changing attitudes and stimulating behavioral intentions. This speaks both well and poorly about personal **selling**. In view of the cost considerations, advertising would appear to be a far more efficient medium than one would assume. (Thus, even when **money** is no object, **multiple** ads may **equal** the effectiveness of personal **selling**.) These findings would appear to indicate that re-evaluating budget appropriations might be in order--dependent on the other objectives--in instances where either personal **selling** or advertising might be used. ...

Operators mis-guess and misunderstand as LDO auction turns to farce

Anonymous

New Media Markets v12n17 PP: 5-6 Sep 22, 1994

JRNL CODE: NEW

ABSTRACT: The **auction** of the Eastern Derbyshire franchise in September 1994 turned into a farce as all 3 expected **bidders** stayed away. Nynex, General Cable, and Diamond, all of which have franchises bordering on the advertised area, were expected to **bid** for the 3rd local-delivery-operator (LDO) franchise to be advertised, with the spoils going to the highest **bidder**. Both NYNEX and Diamond held back because they were certain that General Cable's Yorkshire Cable group would put in a higher **bid**. But Yorkshire did not **bid** because of what appears to be confusion over the franchising rules and process. The Independent Television Commission said that it made the rules and process absolutely clear, in guidance **notes** and **several** conversations with operators.

... six months from now publishers will no longer be talking doom and gloom."

As for **auctions**, the agent agreed that they're still going on as before, although, in Matson's...

...fewer for paperback rights only, and the money is less." Pryor prefers multiple submissions to **auctions**, although she considers sending manuscripts to between four and six publishers "unmanageable." Priest suggests that "the biggest deals are not necessarily made at **auctions**. If you've got a hot book, clearly an **auction** is called for, but if you've got a well-known author, you only **auction** if the author has decided to leave the house he's at." Knowlton notes that "the pressure from authors to get a deal going does lead to **auctions**." Lampack's firm virtually sells everything through multiple submission. "I don't like the term '**auction**' because it commits you to **selling** to the highest **bidder**. We always want to reserve the right to take the best possible deal--advance plus most important thing." Lampack also likes the feed-back that comes from **multiple** submission. "You get **valuable** marketing and editorial information that way."

Dec 6, 1996
Language: English Record Type: Abstract
Document Type: Magazine/Journal; Trade

ABSTRACT:

SBC WARBURG report by Arnott, R., et alx0D Saga Petroleum has won the auction for Santa Fe Exploration, the North Sea assets of the Kuwait Petroleum Corporation with a bid of \$1.23 billion ((L)745 million). The final bid represented a 54% premium over the industry consensus valuation of \$800 million a 26% premium...

...may be one factor why many companies, including Enterprise and LASMO, decided either not to bid or bid at a level well short of the price.x0D

Microwave's auction brings in thousands
Cincinnati Enquirer (OH), pB11
June 8, 1991
Language: English Record Type: Abstract
Document Type: Newspaper; Trade

ABSTRACT:

Cincinnati Microwave had a public auction to sell surplus equipment as part of its continuing restructuring. The auction attracted 1,500 bidders from across the US to Microwave's headquarters in Symmes Township. Microwave has shut down several money-losing businesses to concentrate on radar detectors, its Guardian home incarceration system and assembling electronic parts for other companies. The Microwave auction was handled by Roos Dove, chrnm of Ross-Dove. The auction offered 760 lots. Each lot could consist of a single item or boxes of thousands...

Practical Active Currency Management for Global Equity Portfolios
(For equity portfolios that have more than 10% allocated to international currencies, a single, technically-based active currency management strategy yields the highest risk-adjusted return in a majority of time periods analyzed from 1972-99)

TEXT:

...on a forward contract is implicitly zero, the actual gain or loss is driven by **currency** return variance. I estimate **cash** flow costs as the product of monthly **currency** price median deviation and average **cash conversion** cost. These costs amounted to 1 basis point of the international portfolio for each month a contract is settled.(5)
Direct contract costs are transaction costs associated with **selling currency** forward. These are estimated to amount to half of the **bid -ask** spread on one-month forward contracts, or 3.5 basis **points** of the international portfolio for each month a contract is settled.(6)

Management and custodial...

...TEXT: of triple-A convertible bonds issued by a foreign corporation and denominated in a foreign **currency**. It then sold a call on the underlying common to strip out the call embedded in the bond and entered into a cross-**currency** swap to **convert** the coupon into a U.S. LIBOR floater. The premium from **selling** the call added to the floater's return, giving Intel 45 to 50 basis **points** over U.S. LIBOR, Lee reports.

The **convert** wasn't Intel's first venture into foreign securities. Although the company doesn't take on unhedged **currency** risk--"that's not our business," Lee says--it will buy foreign securities that, with a hedge, **offer** it better returns than U.S. Treasuries. Such opportunities are few, since the cost of...

Title: **EXPECTED PROFIT SELLING GOODS OF VARIABLE QUALITY**

Author: Lutes, Loren D.

Corporate Source: Rice Univ, Houston, Tex

Source: American Society of Civil Engineers, Journal of the Engineering Mechanics Division v 103 n 1 Feb 1977 p 67-78

Publication Year: 1977

CODEN: JMCEA3 ISSN: 0044-7951

Language: ENGLISH

Journal Announcement: 7703

Abstract: The expected profit of a supplier of goods (contractor) is analyzed for the general situation where remuneration is a function of the quality of the goods and this quality cannot be precisely controlled. It is assumed that the supplier can choose the mean value, and possibly the coefficient of variation, of the random quality and it is shown how he can choose the values of these parameters in order to maximize his own profit. The minimum price at which he could bid the job without expecting to lose money is also considered. Several pricing policies are considered, including the conventional policy of a constant price for all units accepted. For each policy graphical results are presented which allow simple computation of the optimum values of production parameters and of the minimum bid price. An example illustrates application of some of the results to a situation where the product is cast-in-place concrete. 4 refs.
